SENTINEL AI

Security Platform — Frontend Walkthrough

Industry Demo: GlobalShip Logistics

30+ modules · Live Supabase data · Real CVEs · Exploit simulation

Dashboard · Exploit Lab · Logistics Lab · Threat Intel · Patch Automation · Compliance · Incidents · Reports

March 2026

Industry Selection

GlobalShip Logistics · Demo

Choose a demo environment — each seeds realistic assets, CVEs, and exploit history

When you first open Sentinel AI you pick an industry. This loads a tailored dataset into the platform — real company names, realistic IP ranges, services with known CVEs, and pre-seeded exploit simulation results.

GlobalShip Logistics

ERPNext · Redis · Kafka
Grafana · PostgreSQL

✓ **ACTIVE DEMO**

NexaPay Financial

Fineract · Vault · Redis
Fraud API · PostgreSQL

ShopVault Commerce

Storefront · Elasticsearch
MinIO · PostgreSQL

MediCore Health

OpenEMR · FHIR API
DICOM · Keycloak

Each industry demo includes: 10–15 seeded assets · 12+ real CVEs · Pre-run exploit simulations · Compliance controls · Patch PRs · Incident history

Dashboard

GlobalShip Logistics · Demo

Security operations overview — the single pane of glass for GlobalShip Logistics

The Dashboard is your security command centre. It aggregates live data from every module — vulnerability counts, exploit results, compliance scores, asset health, and real-time activity — all in one screen. Analysts start here every shift.

Security Score	Open CVEs	Critical CVEs	Assets	Exploits Run
72	12	5	10	6
/100	tracked	CVSS 9+	monitored	4 succeeded

WHAT'S ON THE DASHBOARD

Security Score Widget

Weighted score across 6 domains:
Vulnerability, Patch, Compliance,

Exploit Defense, Threat Intel, IR

Updates in real-time as data changes

KPI Cards

Open CVEs by severity

Assets monitored vs unpatched

Active incidents + SLA status

Exploit simulation success rate

Exploit Timeline

Chart of all sandbox simulations

Success vs blocked over time

Drill-down links to each result

MITRE technique overlay

Compliance Overview

ISO 27001 · SOC 2 · PCI DSS

Progress bars per framework

Pass / In-Progress / Failing counts

One-click to full compliance page

API Integration Status

Connected tools (GitHub, AWS, GCP…)
Last sync time per integration

CVE count surfaced per tool

Warning badges on stale connections

Quick Actions available: Run Scan Now · New Incident · Generate Report — all accessible from the top of the page

Real-Time Activity Feed — last 10 events streamed live: exploit completions, CVE syncs, patch PRs created, threat feed updates, compliance report generations. Each entry shows timestamp, actor, and event detail.

Asset Inventory

Every monitored asset — servers, services, containers, databases

GlobalShip Logistics · Demo

Asset Inventory is the source of truth for all infrastructure. Every asset in the digital twin is listed here with its type, IP, tags, criticality, patch status, and last scan time. Vulnerabilities and exploit results are always linked back to an asset.

Total Assets	High Criticality	Asset Types	Last Scan	Linked CVEs
10	6	4	Jan 14 2024	12
GlobalShip logistics stack	4 high + 2 critical	server · service · container · DB	All assets covered	Across all assets

LOGISTICS ASSETS — LIVE FROM SUPABASE

HOSTNAME	TYPE	IP ADDRESS	CRITICALITY	TAGS
erpnext-server	server	172.20.0.11	CRITICAL	erpnext · erp · supply-chain · port-8069
redis-tracking	service	172.20.0.15	HIGH	redis · cache · tracking · port-9379
kafka-logistics	service	172.20.0.14	HIGH	kafka · streaming · event-bus · no-auth
postgresql-shipdb	service	172.20.0.17	HIGH	postgresql · shipments · pii · port-5432
grafana-monitoring	service	172.20.0.12	MEDIUM	grafana · monitoring · dashboards · port-9100
gitlab-ce	service	172.20.0.13	HIGH	gitlab · devops · ci-cd · source-code
prometheus	service	172.20.0.16	LOW	prometheus · metrics · unauthenticated · port-9191
warehouse-iot-gw	container	172.20.0.19	CRITICAL	iot · gateway · warehouse · mqtt · exposed
route-optimizer	service	172.20.0.18	MEDIUM	python · ml · routing · optimization
shipment-api	service	172.20.0.20	MEDIUM	rest-api · shipments · json · port-8080

Risk Management

GlobalShip Logistics · Demo

Likelihood × Impact risk register with owner tracking and mitigation plans

Risk Management gives the security team a structured way to track organisational risks beyond individual CVEs. Each risk has a likelihood score, impact score, combined risk score, owner, and mitigation plan. The heat map visualises the entire risk landscape at a glance.

Total Risks	Score 15+	In Progress	Mitigated	Max Score
8	2	3	2	25
Org-wide	Immediate action	Active mitigation	Controls deployed	Log4Shell on ERP

RISK REGISTER — TOP RISKS

RISK	TITLE	CATEGORY	LIKELIHOOD	IMPACT	SCORE	STATUS
R-001	Unpatched CVE-2021-44228 (Log4Shell) on ERP server	Vulnerability	5 / 5	5 / 5	**25**	OPEN
R-002	Insufficient MFA for Admin Accounts (78% coverage)	Identity	3 / 5	5 / 5	**15**	IN PROGRESS
R-003	Third-Party Dep with Known RCE (log4j-core <2.20)	Supply Chain	3 / 5	4 / 5	12	OPEN
R-005	Ransomware via Phishing — Finance Department	Human Factor	3 / 5	4 / 5	12	IN PROGRESS
R-007	API Gateway Exposed Without WAF	Network	4 / 5	3 / 5	12	MITIGATED
R-008	Inadequate DR / BCP Testing — no RTO verified	Continuity	2 / 5	5 / 5	10	IN PROGRESS
R-004	Container Escape via runC vulnerability	Container	2 / 5	4 / 5	8	OPEN
R-006	Weak Encryption on Shipment Data at Rest	Data	2 / 5	3 / 5	6	MITIGATED

Each risk links to affected CVEs, assets, and open incidents. Owners receive automated reminders at review dates. Risk scores are recalculated automatically when linked vulnerabilities are patched or incidents are resolved.

Vulnerabilities

Full CVE inventory with EPSS, KEV status, MITRE mapping and exploit history

GlobalShip Logistics · Demo

The Vulnerabilities page lists every CVE discovered across all assets. Each entry shows its CVSS score, EPSS exploitation probability, CISA KEV status, affected MITRE techniques, blast radius description, and current remediation status. Clicking a CVE opens a deep-detail panel.

Total CVEs	Critical (9+)	CISA KEV	EPSS > 90%	Patched
12	5	4	3	2
All logistics assets	Log4Shell, Redis, Spring…	Known exploited in wild	High exploit probability	Merged PRs verified

CVE TABLE — EXPLOIT PRIORITY RANKED

CVE ID	CVSS	EPSS	KEV	STATUS	MITRE TECHNIQUES	BLAST RADIUS
CVE-2021-44228	10.0	97.5%	YES	IN PROGRESS	T1190 · T1059 · T1027	CRITICAL — RCE on ERP server, access to all shipment data
CVE-2022-22965	9.8	97.2%	YES	OPEN	T1190 · T1059.007	CRITICAL — Spring4Shell RCE on ERP backend
CVE-2022-0543	10.0	89.1%	YES	OPEN	T1213 · T1059	CRITICAL — Redis unauthenticated RCE via CONFIG SET
CVE-2023-46127	8.8	41.2%	NO	OPEN	T1059.006	HIGH — ERPNext stored XSS + default credentials
CVE-2023-25194	8.8	28.5%	NO	OPEN	T1203 · T1048	HIGH — Kafka no SASL auth, PII topic exfiltration
CVE-2024-0985	8.0	15.3%	NO	OPEN	T1611	HIGH — PostgreSQL privilege escalation via ALTER TABLE
CVE-2021-43798	7.5	63.4%	YES	OPEN	T1552	HIGH — Grafana path traversal, arbitrary file read
CVE-2022-32149	7.5	18.9%	NO	PATCHED	T1499	MEDIUM — Grafana auth bypass, merged patch verified
CVE-2023-28154	7.7	32.4%	NO	PATCHED	T1083 · T1005	HIGH — GitLab path traversal, merged patch verified

Filters available: Severity · Status · Environment · Exploitable-only toggle · Free-text search · Sort by EPSS

Exploit Lab

AI-powered sandbox exploit simulation engine aligned to MITRE ATT&CK

GlobalShip Logistics · Demo

The Exploit Lab runs controlled exploit simulations inside an isolated sandbox. You select a CVE, choose dry-run or live mode, and Sentinel AI executes the full exploit chain — recording technique, confidence, duration, and output log. Results prove whether a vulnerability is genuinely exploitable in your environment.

Simulations	Exploited	Blocked	Avg Confidence	Avg Duration
6	4	2	71%	2.3s
Logistics seeded data	67% success rate	33% defense held	Across all sims	Per simulation

SIMULATION RESULTS — GLOBALSHIP LOGISTICS

SANDBOX ID	CVE	MITRE TECHNIQUE	RESULT	CONFIDENCE	DURATION	TIMESTAMP
sandbox-logistics-001	CVE-2021-44228	T1190 — Initial Access	EXPLOITED	91%	2.1s	2024-01-14 09:00 UTC
sandbox-logistics-002	CVE-2022-22965	T1190 — Initial Access	EXPLOITED	94%	1.9s	2024-01-14 09:05 UTC
sandbox-logistics-003	CVE-2022-0543	T1213 — Data from Repos	EXPLOITED	88%	3.1s	2024-01-14 09:10 UTC
sandbox-logistics-004	CVE-2023-25194	T1203 — Client Exec	BLOCKED	31%	0.9s	2024-01-14 09:15 UTC
sandbox-logistics-005	CVE-2021-43798	T1552 — Unsecured Creds	EXPLOITED	96%	1.2s	2024-01-14 09:20 UTC
sandbox-logistics-006	CVE-2024-0985	T1611 — Container Escape	BLOCKED	22%	4.5s	2024-01-14 09:25 UTC

HOW IT WORKS

1. Select an open CVE from the dropdown (filtered to your org's assets)
2. Choose mode: Dry Run (safe — no real changes) or Live (full sandbox exploit chain)
3. Sentinel AI executes the exploit payload against an isolated container replica
4. Result recorded: technique, confidence score, duration, stdout output log, success/blocked verdict
5. Re-run anytime to verify a patch actually blocks the exploit — CI/CD gate integration available

Logistics Lab

Real CVE exploits against live running logistics services — industry-specific attack lab

GlobalShip Logistics · Demo

The Logistics Lab is an industry-specific variant of the Exploit Lab. It runs exploit modules directly against the six live Docker services spun up in the logistics environment (ERPNext, Redis, Kafka, Grafana, Prometheus, PostgreSQL). Each service card shows its CVE, severity, live status, and a Run Exploit button.

Services Running	CVEs in Database	Confirmed Exploited	Blocked
6 / 6	12	4	2
All containers healthy	Seeded for logistics stack	Redis · ERPNext · Grafana · PG	Kafka · Container escape

SERVICE EXPLOIT CARDS

ERPNext — EXPLOITED

CVE-2023-46127 — 8.8 HIGH

Confidence: 91%

Stored XSS via item description field + default credentials (Administrator:admin) give full ERP access

Redis — EXPLOITED

CVE-2022-0543 — 10.0 CRITICAL

Confidence: 88%

No authentication required — CONFIG SET dir + SLAVEOF commands achieve remote code execution

Apache Kafka — BLOCKED

CVE-2023-25194 — 8.8 HIGH

Confidence: 31%

JMX RCE attempt blocked — SASL auth in place. All 6 topic names still exposed via metadata

Grafana — EXPLOITED

CVE-2021-43798 — 7.5 HIGH

Confidence: 96%

Path traversal /../../../etc/passwd succeeds — reads /etc/grafana/grafana.ini with admin credentials

Prometheus — BLOCKED

CVE-2019-3826 — 6.1 MEDIUM

Confidence: 22%

Unauthenticated /metrics endpoint reveals internal host IPs but RCE chain did not succeed

PostgreSQL — EXPLOITED

CVE-2024-0985 — 8.0 HIGH

Confidence: 84%

Low-privilege user escalates to postgres superuser via ALTER TABLE ... SET SCHEMA exploit

Red Team / Adversary Emulation

GlobalShip Logistics · Demo

MITRE ATT&CK kill-chain campaigns with real-world threat actor TTPs

Red Team enables structured adversary emulation exercises mapped to the full MITRE ATT&CK kill chain. Teams create campaigns emulating real threat actors (APT29, LockBit 3.0, etc.), track each phase, and log critical findings with CVSS scores and remediation recommendations.

ACTIVE & RECENT CAMPAIGNS

RT-2026-03	**APT29 Emulation — Cozy Bear TTPs**	APT29	**ACTIVE**	14 findings · 4 critical	**68%**
RT-2026-07	**APT Simulation — Finance Division**	APT29	**COMPLETED**	5 findings · 2 critical	**100%**
RT-2026-02	**Ransomware Kill Chain — LockBit 3.0**	LockBit 3.0	**COMPLETED**	22 findings · 8 critical	**100%**
RT-2026-01	**Supply Chain Attack — SolarWinds-style**	Custom	**COMPLETED**	11 findings · 3 critical	**100%**

KILL CHAIN — APT29 EMULATION (PHASE: LATERAL MOVEMENT)

Reconnaissance	Initial Access	Execution	Persistence	Priv. Escalation	Defense Evasion	Lateral Movement	Exfiltration	Impact
TA0043	TA0001	TA0002	TA0003	TA0004	TA0005	TA0008	TA0010	TA0040
Complete	Complete	Complete	Complete	Complete	Complete	In Progress	Pending	Pending

CRITICAL FINDINGS

Domain Admin via Kerberoasting in 8 min

CVSS 9.8

→ Enforce Kerberos AES, disable RC4

EDR bypassed using living-off-the-land binaries

CVSS 8.6

→ Enable script block logging, restrict LOLBins

Lateral movement to 14 systems in 22 min

CVSS 9.1

→ Network segmentation, disable NTLM

2.4 GB exfiltrated via HTTPS to external C2

CVSS 8.8

→ DLP enforcement, SSL inspection

Attack Graph

Auto-generated kill-chain visualisation from CVE + asset topology data

GlobalShip Logistics · Demo

The Attack Graph automatically builds a directed graph showing how an attacker could move through your infrastructure. Nodes are assets with their highest CVE. Edges are possible lateral movement paths based on network reachability and exploit confidence. The critical path is highlighted in red.

Data at risk

ALL PII

ATTACK PATH NARRATIVE

Internet → ERPNext (Log4Shell, T1190) → Redis (AUTH bypass, T1213) → PostgreSQL (priv-esc, T1611) → C2 exfiltration (T1041)

Breaking the chain: Patch CVE-2021-44228 immediately to eliminate initial access. Add Redis requirepass + ACLs to block lateral movement from ERP. Network segment ERPNext ↔ Redis — they should not communicate directly.

MITRE Coverage: TA0001 Initial Access · TA0008 Lateral Movement · TA0009 Collection · TA0010 Exfiltration

Patch Automation

GlobalShip Logistics · Demo

AI-generated code fixes → GitHub PR → CI/CD gate → exploit re-simulation → auto-merge

Patch Automation closes the loop between detection and remediation. When a CVE is confirmed exploitable, Sentinel AI generates a minimal code fix, opens a GitHub Pull Request, waits for CI to pass, re-runs the exploit simulation against the patched build, and auto-merges when the exploit is blocked.

1 Detect
CVE confirmed exploitable in sim

2 Generate
AI writes minimal code fix

3 PR Create
Opens GitHub PR with full diff

4 CI Gate
Unit + integration + security tests

5 Re-Simulate
Must BLOCK to proceed

6 Auto-Merge
All gates pass → merge approved

PATCH QUEUE — GLOBALSHIP LOGISTICS

CVE	BRANCH NAME	CI STATUS	RE-SIM	MERGE STATUS	CREATED
CVE-2021-44228	sentinel/fix/CVE-2021-44228/erpnext-v15/20240114	RUNNING	PENDING	OPEN	Jan 14 2024 10:00
CVE-2022-0778	sentinel/fix/CVE-2022-0778/prometheus/20240113	PASSED	EXPLOIT BLOCKED	APPROVED	Jan 13 2024 12:00
CVE-2022-32149	sentinel/fix/CVE-2022-32149/grafana-monitoring/20240112	PASSED	EXPLOIT BLOCKED	MERGED	Jan 12 2024 15:00
CVE-2023-28154	sentinel/fix/CVE-2023-28154/gitlab-ce/20240112	PASSED	EXPLOIT BLOCKED	MERGED	Jan 12 2024 14:00

KEY CAPABILITIES

Branch naming convention: sentinel/fix/<CVE>/<service>/<date> — every PR is traceable to a specific CVE and asset

Re-simulation gate: Exploit module replays against the patched container. Must return BLOCKED verdict before merge is allowed

Human override: Team leads can approve merge manually. All auto-merges are logged with full audit trail

Supported platforms: GitHub, GitLab, Bitbucket — configurable via the Integrations page

Threat Intelligence

GlobalShip Logistics · Demo

NVD / CISA feeds · EPSS exploitation probability · KEV watchlist · MITRE mapping

Threat Intelligence aggregates external CVE data from NVD, CISA KEV, and EPSS into a single ranked view. Every CVE is scored by EPSS (probability it will be exploited in the next 30 days) and cross-referenced against CISA's Known Exploited Vulnerabilities catalogue. Drill into any CVE for full technical detail.

CVEs Tracked	CISA KEV	EPSS > 90%	NVD Last Sync	MITRE Techs
12	4	3	Jan 14	8
Logistics scope	Actively exploited in wild	CVE-44228, CVE-22965, CVE-0543	All feeds current	Mapped to kill chain

INTELLIGENCE FEED — EPSS RANKED

CVE ID	CVSS	EPSS	KEV	MITRE TECHNIQUES	NVD DESCRIPTION	AFFECTED SERVICE
CVE-2021-44228	10.0	97.5%	YES	T1190 · T1059 · T1027	Apache Log4j2 JNDI injection allows RCE	ERPNext / Log4j
CVE-2022-22965	9.8	97.2%	YES	T1190 · T1059.007	Spring Framework RCE via data binding	Spring ERP Backend
CVE-2022-0543	10.0	89.1%	YES	T1213 · T1059	Redis Lua eval sandbox escape → RCE	Redis Tracking
CVE-2021-43798	7.5	63.4%	YES	T1552	Grafana path traversal reads arbitrary files	Grafana Monitoring
CVE-2023-46127	8.8	41.2%	NO	T1059.006	ERPNext stored XSS via item description	ERPNext
CVE-2023-25194	8.8	28.5%	NO	T1203 · T1048	Kafka JMX RCE via JDBC deserialization	Apache Kafka
CVE-2024-0985	8.0	15.3%	NO	T1611	PostgreSQL priv-esc via ALTER TABLE schema	PostgreSQL Shipdb
CVE-2019-3826	6.1	12.1%	NO	T1046	Prometheus unauthenticated /metrics endpoint	Prometheus

EPSS score = probability of exploitation in the next 30 days (FIRST.org model). CISA KEV = confirmed active exploitation in the wild — treat as P0. Click any CVE row to open the full detail page with CVSS vector, CWE, vendor advisories, and patch links.

Dark Web Monitor

GlobalShip Logistics · Demo

Credential leaks · Data exposure · Threat actors · Exploit sales · Brand abuse

Dark Web Monitor continuously scours dark web markets, paste sites, Telegram channels, and breach databases for any mention of your organisation — employee credentials, customer PII, exploit listings targeting your stack, and threat actor posts. Every finding is triaged, categorised, and linked to affected assets.

Total Findings	Critical	Credentials Leaked	Threat Actors	PII Records
6	3	1,247	2	12,000
Active monitoring	Requires immediate action	Employee email+password	APT29 · RansomHub	For sale — $2,500

DARK WEB FINDINGS

ID	CATEGORY	SEVERITY	STATUS	SOURCE	DESCRIPTION	AFFECTED
dw-003	Data Exposure	CRITICAL	NEW	BreachForums	12k customer PII (names, email, phone) for sale for $2,500	12k customer records
dw-001	Credential Leak	CRITICAL	INVESTIGATING	Breached.vc	1,247 @company employee email/password pairs in breach dump	1,247 creds
dw-006	Ransomware	CRITICAL	INVESTIGATING	RansomHub Blog	RansomHub claims 50GB exfiltrated — org listed on leak site	50GB claimed
dw-002	Threat Actor	HIGH	INVESTIGATING	XSS Forum	APT29 post mentions targeting logistics orgs in EMEA	Brand mention
dw-004	Exploit Sale	HIGH	NEW	0day.today	Ivanti VPN zero-day targeting org's VPN — listed at $45,000	VPN infra
dw-005	Brand Abuse	MEDIUM	MONITORED	OSINT	Phishing domain globalship-secure.com registered (3 days ago)	Brand impersonation

REQUIRED IMMEDIATE ACTIONS

- Force reset all 1,247 compromised accounts. Enable MFA. Revoke all active sessions.
- Declare security incident for RansomHub leak claim. Initiate forensic investigation.
- Engage law enforcement — submit GDPR breach notification (72-hour window for 12k PII records).
- Patch Ivanti VPN immediately. Submit takedown request for exploit listing.
- Register globalship-secure.com lookalike. Submit phishing report to registrar.

Incident Response

GlobalShip Logistics · Demo

6 active incidents · MITRE-mapped playbooks · SLA tracking · Timeline investigation

Incident Response manages the full lifecycle of a security incident — from initial alert triage through containment, investigation, and resolution. Each incident is assigned to an analyst, linked to affected assets, tracked against SLA deadlines, and documented with a timeline of actions taken.

Active Incidents	Critical	SLA Breached	Resolved	Avg MTTR
6	2	2	2	2.5h
Open or in-progress	Ransomware · S3 breach	Exceeded response time	Within SLA	Last 30 days

INCIDENT QUEUE

ID	TITLE	SEVERITY	CATEGORY	STATUS	ASSIGNED	PROGRESS	SLA
inc-001	Ransomware Staging — WORKSTATION-042	Critical	Malware	Investigating	j.smith	35%	SLA BREACHED
inc-002	Unauthorised DB Access from External IP	High	Unauth Access	Containment	a.chen	60%	SLA BREACHED
inc-003	DNS Tunnelling — k8s-node-07	Medium	C2 Communication	Analysis	m.torres	45%	Within SLA
inc-004	SSH Brute Force — prod-web-01	High	Brute Force	Resolved	r.patel	100%	Closed 1.8h
inc-005	Exposed S3 Bucket Data Access	Critical	Data Exposure	Resolved	j.smith	100%	Closed 3.2h
inc-006	Lateral Movement via Compromised SVC Acct	High	Lateral Movement	Escalated	s.dev	20%	Within SLA

INC-001 SPOTLIGHT — LOCKBIT 3.0 RANSOMWARE STAGING

Detection: EDR alert on WORKSTATION-042 — LockBit 3.0 staging files found in C:\ProgramData\

Action taken: Host isolated from network. Forensic memory snapshot taken. IR team paged at 05:35.

Lateral risk: prod-web-01 shows unusual outbound connections to WORKSTATION-042 — possible spread.

Next steps: Memory analysis · Full AD audit · Check for persistence via registry run keys (T1547.001)

Compliance

GlobalShip Logistics · Demo

ISO 27001 · SOC 2 Type II · PCI-DSS v4.0 — live control pass/fail with CVE linkage

The Compliance module maps your current security posture to major regulatory frameworks. Each control is automatically evaluated against live data — if a critical CVE is open, the linked control turns red. Analysts can add evidence, update status, and generate audit-ready reports.

SAMPLE CONTROLS — ISO 27001 DOMAIN A.12 (OPERATIONS SECURITY)

CONTROL	NAME	STATUS	EVIDENCE / NOTES
A.12.1.2	Change Management	PASSING	All changes reviewed in JIRA. CAB approval documented. 100% audit coverage.
A.12.2.1	Malware Protection	FAILING	EDR deployed on 94 of 97 endpoints. 3 missing agent — gap ticket #1247 open.
A.12.4.1	Event Logging	PASSING	Centralised SIEM with 90-day hot + 1-year cold retention. Log integrity verified.
A.12.6.1	Technical Vulnerability Mgmt	IN PROGRESS	SCA running in CI pipeline. CVE-2021-44228 open >30 days — SLA risk.
A.12.3.1	Information Backup	PASSING	Daily encrypted backups. Weekly restore test passing. RTO/RPO documented.
A.12.7.1	Audit Controls	FAILING	PostgreSQL audit logging not enabled. DB admin actions untracked — risk-006.

Auto-scan triggers a control re-evaluation every time a CVE is patched or a new asset is added. Generate audit-ready PDF reports from the Reports page with one click.

Reports

Executive summary · Infrastructure scan · Threat intelligence · Compliance PDF export

GlobalShip Logistics · Demo

The Reports module generates structured, exportable security reports from live platform data. Each report type pulls real-time figures — no copy-paste. Reports are PDF-ready for board meetings, auditors, and compliance submissions. The page also provides one-click data seeding for demos.

Security Executive Report

- Overall security score trend
- Top CVEs by risk priority
- Incident summary + MTTR
- Compliance framework scorecard
- Recommended top 5 actions

DEMO DATA SEEDING (FROM THE REPORTS PAGE)

Seed Exploit Data:	Inserts 2024 CVEs, exploit results, and compliance controls into Supabase for GlobalShip Logistics
Seed Threat Intel:	Populates dark web findings, threat actor profiles, CVE intelligence, and EPSS scores
Seed Compliance:	Creates ISO 27001 · SOC 2 · PCI-DSS control records with pass/fail status and evidence

Additional Modules

GlobalShip Logistics · Demo

Code Scanning · Zero-Day · Phishing · Infrastructure · Cloud · Container · Identity · DevSecOps

Sentinel AI includes 30+ specialised pages. Below is a guided overview of the remaining modules available in the navigation — all populated with live logistics industry data.

Code Scanning

- SAST alerts from GitLab / GitHub Advanced Security
- Severity · Rule ID · File:line location
- Filter by severity, repo, language
- Links to exploit lab for relevant CVEs

Zero-Day Tracker

- Monitors CVEs with PoC-in-the-wild status
- Tracks newly published 0-days daily
- EPSS spike detection for emerging threats
- Auto-escalates to Exploit Lab if EPSS > 80%

Phishing & Social Eng.

- Simulation campaigns with click/open rates
- Employee awareness scoring per department
- Template library — spearphish, vishing, smishing
- Automatic training assignment on click

Infra Scanner

- Nmap-style scan of all registered assets
- Open ports, service banners, OS fingerprint
- CVE match against discovered services
- Scheduled or on-demand scan trigger

Digital Twin

- Live topology graph of all assets
- CVE severity overlay on each node
- Network segment boundaries shown
- Click node → asset detail + vuln list

Cloud Security

- AWS · GCP · Azure posture checks
- GCP Security Command Center findings
- Misconfiguration: open S3, IAM over-permission
- CIS Benchmarks scoring per cloud account

Container Security

- Docker image CVE scan via Trivy/Grype
- Runtime policy enforcement
- Kubernetes workload hardening checks
- Image registry scan on every push

Identity & Access

- IAM inventory: users, roles, service accounts
- MFA coverage: 78% admin accounts (target 100%)
- Privileged access review workflow
- Anomalous login detection + alert

DevSecOps

- CI/CD pipeline security gate status
- SCA (deps), SAST, secrets scanning per repo
- Policy: block merge on critical findings
- GitLab · GitHub Actions · Jenkins support

Network Security

- Firewall rule analysis + anomalies
- East-west traffic monitoring per segment
- Anomalous connection alerts
- Network topology + open route discovery

Malware Analysis

- Static + dynamic sandbox analysis
- IOC extraction (IPs, domains, hashes)
- YARA rule matching against samples
- Kill chain stage classification

Integrations

- Connect GitHub, GitLab, AWS, GCP, Azure
- Jira, Slack, PagerDuty for alerting
- NVD, CISA, EPSS feed configuration
- Per-integration sync status + last sync time

SENTINEL AI

The Complete AI-Powered Security Operations Platform

GlobalShip Logistics Demo — All modules live

12	**CVEs tracked** Log4Shell · Spring4Shell · Redis...
10	**Assets monitored** Servers · services · containers
6	**Exploits simulated** 4 confirmed exploitable, 2 blocked
4	**Patches auto-created** 2 merged, CI + re-sim verified
6	**Dark web findings** Credentials · PII · Ransomware
6	**Active incidents** Ransomware staging under analysis

Other industry demos available:

NexaPay Financial · ShopVault Commerce · MediCore Health Systems
